The RSJ – Pacific Style Applicator represents a step ahead in the wiring harness industry. Being designed with a female coupling to the Press, it includes a PATENTED Micrometric Adjusting System for the crimping wire height with 0.03mm (0.00078") resolution in a 2.7mm (0.106") range. It fits to any crimping Press having a shut height of 121mm. The Micrometric Adjusting allows very quick applicator set up, improves productivity and secures the quality crimping. The terminal feeding can be either mechanic or pneumatic, for rear feed, left or right side feed contacts. It can suit any terminal with a max thickness of 1.2mm and 40mm pitch. Max wire section allowed is 10mm²
